

Global Medical Device Supply Chain Analytics

SAP Procurement Process Flow (Simulated)

Purpose

This document illustrates a standard procurement process in an ERP environment and demonstrates how transactional data ultimately supports Business Intelligence reporting in Power BI.

Business Scenario

A sudden increase in demand for implantable medical devices causes inventory for a critical component to fall below the defined safety stock level. The ERP system identifies the shortage and initiates the procurement process.

End-to-End Process Flow

Data Objects Generated

Process Step	Primary Data Generated
Demand Planning	Forecast Quantity
MRP Run	Purchase Requisition
Procurement	Purchase Order
Supplier Delivery	Shipment Information
Warehouse Receipt	Inventory Records
Finance	Invoice & Payment
Analytics	KPI Reporting

Connection to the Dashboard

Each stage of the procurement cycle contributes data used within the Supply Chain Analytics Dashboard:

- Procurement Dashboard → Purchase Orders & Spend
- Supplier Dashboard → Fill Rate & On-Time Delivery
- Inventory Dashboard → Current Stock & Safety Stock
- Transportation Dashboard → Shipments & Freight Cost

Business Value

Understanding the ERP procurement flow enables analysts to trace operational issues back to their source rather than relying solely on dashboard outputs.

Disclaimer: *This project was developed as a personal portfolio project using a simulated supply chain dataset. The company context, business scenarios, and analysis are intended to demonstrate Business Intelligence, data modeling, and dashboard development skills and do not represent actual operational data.*
